FREE YOURSELF *from* MANUAL METERING
and Serve Your Customers Better

TIMELY, AUTOMATIC METERING DONE ACCURATELY

FM *Audit* ™ **Onsite**
Facilities Management Solutions

FREE YOURSELF FROM MANUAL METERING & SERVE YOUR CUSTOMERS BETTER

Residing unobtrusively on your customers' networks, FMAudit™ OnSite™ accurately performs automatic, regularly scheduled metering of networked print assets, including copy, fax, scan and color devices. Timely, automated metering generates accurate billings, which ultimately means faster customer approvals.

And you have more time to focus on your core business – improving customer services and generating more revenues.

FLEXIBLE > FMAudit™ OnSite™ automates the frequency of when to collect the information as well as where, when and in what format to distribute the data. *OnSite lets you decide how you wish to best service your customer.*

ACCURATE > FMAudit™ OnSite™ collects print asset data with computer precision, eliminating time-consuming, manual metering and clerical errors which can delay payments and cause costly reconciliations. Thus reducing and or eliminating costly reconciliations.

TIMELY > Each metering captures the total usage during contracted billings periods - unlike a manual process where metering is typically done before or after the end of the billing period, whereby clicks are either deferred to the next billing cycle or incorrectly accounted for in the current billing cycle.

HOW ONSITE™ WORKS FOR YOU

Transparent to your customers, FMAudit™ OnSite™ uses a powerful data collection engine to capture in-depth print asset data. Being "device manufacturer neutral," FMAudit™ OnSite™ operates with ease in multiple-brand, diverse print asset environments including fleets having thousands of devices.

FMAudit™ OnSite™ automatically sends metering data on the schedule you set up, via your choice of:
- *1024-bit encrypted XML*
- *Email with attachments*

Either way, you can take the metering data and populate the databases supporting your accounting system, Customer Relationship Management (CRM) system, Enterprise Resource Planning (ERP) system, or FMAudit's Central™ Product: Centralized Data Repository and Customer Portal.

Important for your customers and you:
- *FMAudit™ OnSite™ is firewall friendly to be compatible with secure corporate networks.*
- *FMAudit™ OnSite™ is self-contained and maintenance-free with software-resident dynamic HELP documentation, loaded with all the information you need.*
- *You can access FMAudit™ OnSite™ remotely over the internet for on-demand audits or configuration changes.*
- *No third party can view your customer data. No ASP. The data is secure and confidential.*

ONGOING ASSESSMENTS FOR ACCOUNT GROWTH

FMAudit™ OnSite™ can also be used for ongoing assessments... it also collects meters on non-managed assets. Freed-up from manual metering and billing reconciliations, you now have time to analyze print audit data in multiple report formats and make cost-saving recommendations to your customers, based on reliable printer usage information. You can grow your core product revenue with:
- *Engine consolidation*
- *Print cost reduction*
- *Device service alerts*
- *Toner usage and replenishment programs*
- *Additional value-added programs*
